

Learning about circuits this week was very interesting to me. I have never heard of this website TinkerCad, and I haven't learned about circuits or anything like it since my science classes back in high-school. It was also very cool to see how to use code and code blocks to work with the circuit boards. I remember using code blocks in a few previous classes, but I had no idea they could be used for things like this. I was very surprised how simple it seemed at first. It seems like a great way to get started in both programming and electrical engineering (or whatever you'd call this sort of work). I'd really like to continue learning about this sort of thing, and to see how other people are using these boards.
