

I have always enjoyed seeing how AR and VR are progressing as technology advances.

Unfortunately, of all the apps I tried this week (EON-XR, OrBeat, INKHUNTER, SketchAR and Just a Line) I was only able to get EON-XR and INKHUNTER to work properly on my own phone. I was able to draw in Just a Line, but it refused to export a video of my creations. However, it was still really cool to see and research all the new ways AR is being used. I think AR is already being used in a lot of different fields, but as the technology improves I think it will be used in pretty much all fields. I can see it being used extensively in schools to replace physical representations of different tasks, and I can also see AR being used to enhance day to day life and even replace some physical objects entirely if we ever get to a point where we can fit the tech into everyday eye glasses or contacts rather than a bulky headset or smartphone (hopefully in my lifetime).
